

Semantic transparency and variation in nominal syntagmatic compounds in Romance languages

Compounds or syntagms?

vent d'ouest – *vent du nord*
accident de parcours – *accident de la route* (Rackow 1994: 1f.)

juguete para niños
juguete de niños

un chapeau à plumes
un grand chapeau à plumes blanches (Bosredon, Tamba 1991:42)

Syntagmatic compounds - Terminology

phrasal compounds (Bisetto 2009)

syntactic compounds (Rio-Torto & Ribeiro 2009)

improper compounds (Kornfeld 2009)

phrasal lexemes (Masini 2007,2009,2012)

frozen multiword units (Guevara 2012)

lexicalized syntactic constructions (Villoing 2012)

lexicalized phrases (Fraudin 2009)

syntactic words (DiSciullo & Williams 1987)

prepositional compounds

Syntagmatic compounds - Definition

Syntagmatic compounds include generally (partially) lexicalized constructions, such as:

[N PREP N]N	<i>dulce de leche</i> , ‚caramel‘
[N PREP Art N]N	<i>árbol de la cera</i> ‚wax myrtle‘
[N + A]N	<i>hierbabuena</i> ‚mint‘
[A + N]N	<i>malasombra</i> ‚evil person‘

Moyna 2011: 38

- These constructions possess an internal structure that – at first glance - appears syntactic
- These constructions also show certain characteristics of lexicalization, fixedness as well as semantic specification

Syntagmatic Compounds - Definition

Table 1. Phrasal nouns in Romance languages

Language	Types	Phrasal lexemes	Lit.	Glosses
French	[ADJ N] _N	<i>première violon</i>	first violin	'first violin'
	[N à V _{INF}] _N	<i>salle à manger</i>	room at eating	'dining room'
Italian	[N da N] _N	<i>camera da letto</i>	room from bed	'bedroom'
	[N ADJ] _N	<i>disco rigido</i>	disk rigid	'hard disk'
Portuguese	[N de N] _N	<i>cadeira de rodas</i>	chair of wheels	'wheel chair'
	[N ADJ] _N	<i>estado civil</i>	status civil	'marital status'
Spanish	[N ADJ] _N	<i>luna nueva</i>	moon new	'new moon'
	[N de N]	<i>coche de carreras</i>	car of races	'race/racing car'

Table 3. N PREP N constructions in Italian

Structure	Examples	Lit.	Glosses
[N di N] _N	<i>casa di cura</i>	home of treatment	'nursing home'
[N a N] _N	<i>camera a gas</i>	room at gas	'gas chamber'
[N da N] _N	<i>ferro da stiro</i>	iron from iron	'iron'
[N in N] _N	<i>ballo in maschera</i>	ball in mask	'masked ball'
[N per N] _N	<i>cibo per cani</i>	food for dogs	'dog food'
[N con N] _N	<i>corsa con handicap</i>	race with handicap	'handicap race'
[N su N] _N	<i>hockey su prato</i>	hockey on meadow	'field hockey'

N Prep N constructions in Romance languages may be formed by means of different internal prepositions

Syntagmatic compounds – word formation or syntax?

“they [e.g. *fin de semana*, *sabelotodo*] are clearly not formed by any rule of the language, they are “**frozen**” **multiword units** arising as the result of processes of lexicalization and fossilization and **do not belong in the core of word-formation**” (Guevara 2012: 179)

“a sequence of words is a **morphological compound** if it is a lexeme (noun, verb or adjective) constructed from other lexemes, according to a **non-syntactic mode of organization**” (Villoing 2012:35)

„a **very representative pattern** of phrasal compounds in Portuguese“ (Rio-Torto & Ribeiro 2011)

„Formations of this kind (...) constitute **very productive lexical patterns**“ (Rainer 2016: 2624)

Syntagmatic compounds – word formation or syntax?

	Locuciones	Compuestos sintagmáticos	Colocaciones
Fijación	+ <i>oveja negra</i>	+ <i>moscas blancas</i>	+/- <i>batalla encarnizada</i>
Idiomaticidad	+ <i>lágrimas de cocodrilo</i>	+/- <i>ojo de buey</i> <i>cuello de cisne</i>	+ <i>odio mortal</i>
Lexicalización	+ <i>pájaro de mal agüero</i>	+ <i>paso de cebra</i>	- <i>error garrafal</i>
Unidad de denominación	- <i>edad del pavo</i>	+ <i>escalera de caracol</i>	- <i>envidia sana</i>
Motivación pragmática	+ <i>olla de grillos</i>	+/- <i>diente de león</i>	- <i>éxito fulgurante</i>
Comportamiento paradigmático	- <i>boca del lobo</i>	+ <i>oso pardo, oso panda,</i> <i>oso polar, etc.</i>	+ <i>lluvia torrencial</i>

Buenafuentes de la Mata 2006: 14

other delimitation tests, e.g. Bouvier 2000, Bisetto & Scalise 2005, Lieber & Scalise 2007, Masini 2009, Masini & Scalise 2012)

The role of the prepositional element

The common assumption is that the internal preposition does lack any kind of semantic content and fulfils pure linking functions:

« (...) nous aimerions préciser que **la préposition de ne code pas de sens propre**. Par contre, on peut l'interpréter comme **une instruction spécifique de mise en relation**. » (Bartning 1993: 164)

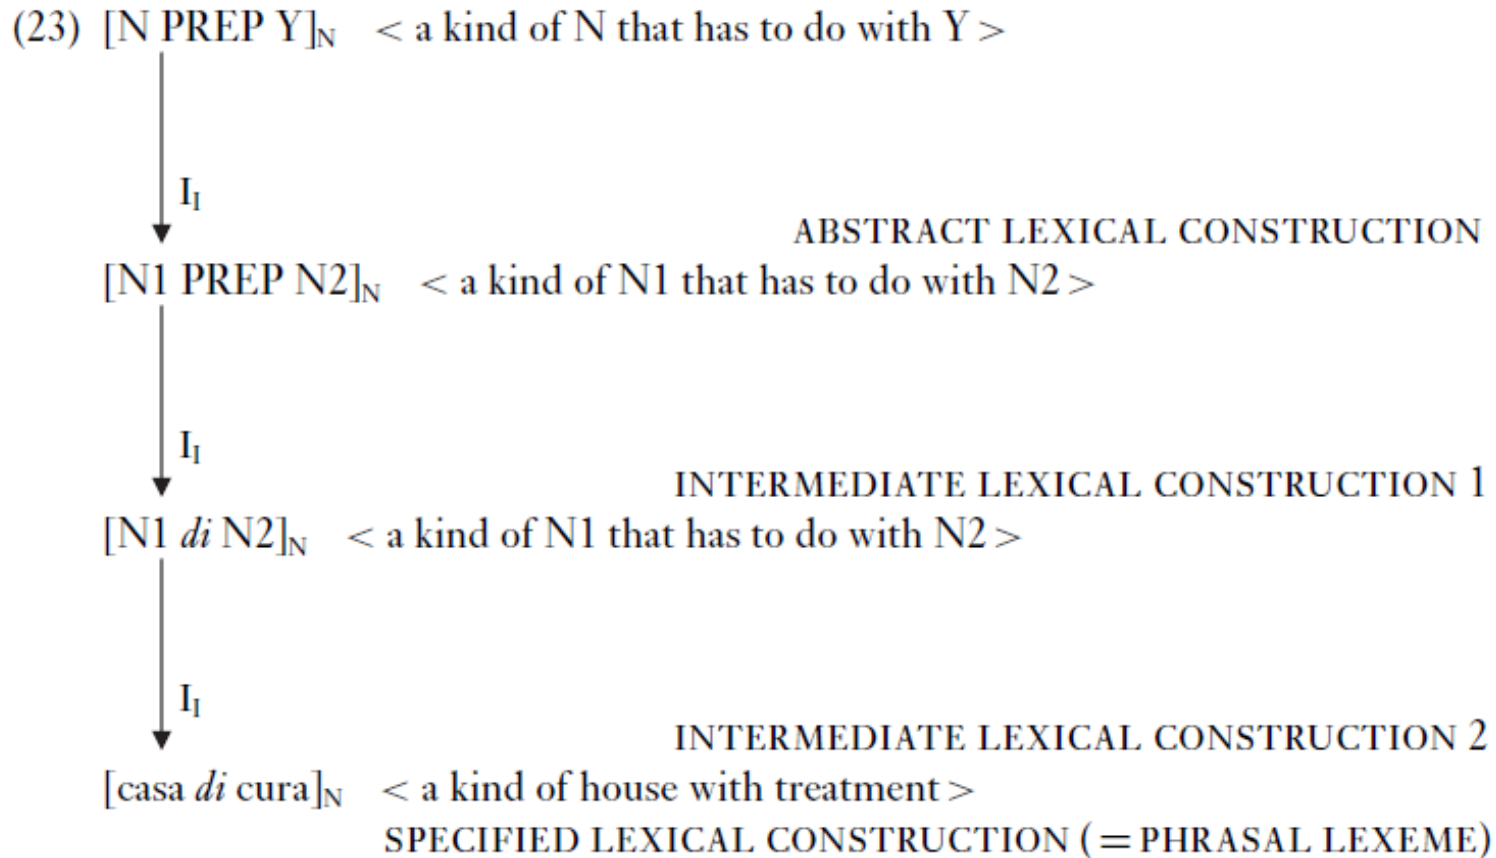

: « Alors **que les prépositions incolores ont pour fonction dominante de vectoriser une relation qu'elles ne codent pas** » (Cadiot 1989)

« **cette préposition a pour vocation première d'exprimer l'opération de construction et de nomination d'une sous-classe (hyponyme) de N1, et non d'une simple occurrence**. Du coup, elle est par nécessité associée peu ou prou a une **perte d information**, ou mieux à ce qu'on appellera un **calibrage référentiel**. » (Cadiot 1993: 196)

« les mots formés à l'aide de *à* et *de* sont aussi des mots complexes sous-classifiants, et les prépositions des « **opérateurs de couplage** ». (Bosredon & Tamba 1991 : 44),

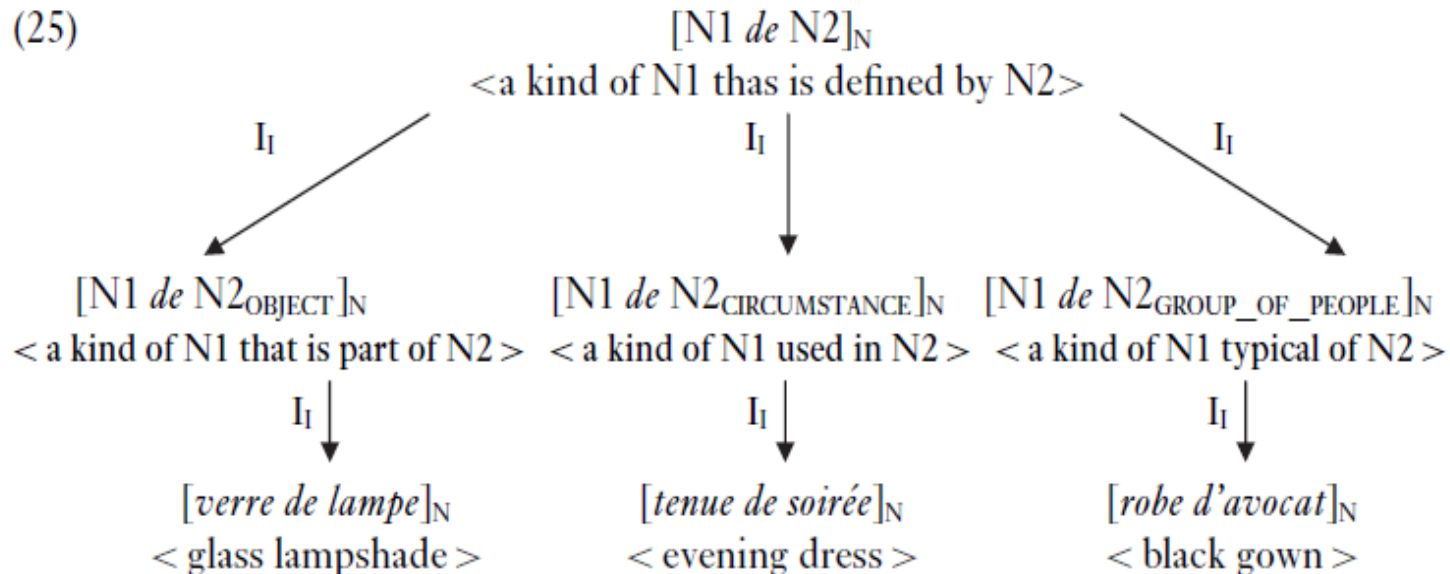

Theoretic background – Construction grammar

Theoretic background – Construction grammar

Syntagmatic compounds –prepositional variation

1. Variation de – **para/pour**

- a. Sp. *fuelle de horno* - *fuelle para horno* (esTenTen)
- b. Pt. *água de lavagem* – *água para lavagem* (ptTenTen)
- c. Fr. *jouet d'enfant* - *jouet pour enfants* (frTenTen)

2. Variation de – **a/à**

- a. Sp. *motores de gasolina* – *motores a gasolina* (esTenTen)
- b. Fr. *épingle de nourrice* - *épingle à nourrice*
- c. Pt. *Fogão de lenha* - *Fogão a lenha* (ptTenTen)

3. Variation de – **en/em**

- a. Fr. *chemise de coton* – *chemise en coton* (frTenTen)
- b. Pt. *bracelete de aço* – *bracelete em aço* (ptTenTen)
- c. Sp. *ciclismo de pisto* – *ciclismo en pisto* (esTenTen)

4. **Elision** [N Prep N] → [N N]

- a. Pt. *efeito de estufa* - *efeito estufa* (Faria 2010)
 - b. Sp. *ducha de teléfono* – *ducha teléfono* (Moyna 2011)
 - c. Fr. *stylo à bille* - *stylo-bille* (Fradin 2009)
-

Dataset – the TenTen Corpus Family

	frTenTen	esTenTen	ptTenTen
Tokens	11,444,973,582	10,994,616,207	4,626,584,246
Words	9,889,689,889	9,497,402,122	3,900,501,097
Sentences	456,065,104	407,205,587	190,221,913
Paragraphs	188,079,362	213,364,685	91,248,976
Documents	20,400,411	22,287,566	10,216,060

<https://the.sketchengine.co.uk> (Corpus Info)

Dataset for the analysis:

- Sample of 100 Million tokens per language (frequencies to 100 millionen tokens normalized and trimmed with a relative frequency smaller than 1 – to avoid sampling errors)
- Automatic extraction of all N Prep N constructions:

Language	Types	Tokens
French	284.432	1.301.850
Spanish	385.162	1.949.941
Portuguese	642.022	3.204.462

Type-Token-Frequenzen Datenset1 (Rohdaten)

Dataset – the TenTen Corpus Family

Datenset2:

- extraction of all paradigmatic sets (same N1 and N2 but different prepositional element)

Language	Types	Tokens
French	18.528	148.248
Spanish	15.219	366.284
Portuguese	173.370	1.477.230

Datenset3:

Type-Token-Frequencies Datenset2

- manual sorted Dataset 2:
- grammaticalised construction (*frente a, jusqu'à, en dehors*)
- no partitive constructions or spatial, temporal or mass nouns (*kilo de, lunes a Viernes, visita a Roma, journées par semaine*)
- no binominal pairs (*dia a dia, instant après instant*)
- no antonyms (*chien sans/avec laisse, personnes avec/sans emploi*)
- no preposition phrase (*N1 à base de, par hasard de*)
- no verb phrase (*mettre N1 en danger, donner N1 à N2*)
- no hybrid forms (*daquela, naquela, deste,...*)

Language	Types	Tokens
French	1063	6991
Spanish	547	10219
Portuguese	6795	58932

Type-Token-Frequencies Datenset3

Quantitative Analysis – first results

Statistical analysis of the factors frequency, productivity and population size*

Quantitative Analysis – first results

- Portuguese shows the highest frequency and productivity in the formation of N Prep N constructions and its internal prepositional variation
 - in the overall analysis (dataset1), Spanish shows a medium frequency and productivity → the analysis of dataset3 does not support this result
 - French appears to be less frequent and productive in dataset1, but this result is contradicted by the analysis of dataset3
 - differences in frequency, productivity and population size also appear in the analysis of the prepositional subsets, especially *avec-con-com*, *à-a-a* and *pour-para-para*
 - the results of the prepositional subsets indicate that constructions with the prepositions *avec* and *pour* are less frequent in French (compared to their counterparts *con-com* and *para-para*), while constructions containing *à* are more frequent and productive than its iberoromantic counterparts (*a*)
-

Qualitative Corpus analysis

Dataset:

manually sorted Datenset3

Language	Types	Tokens
French	1063	6991
Spanish	547	10219
Portuguese	6795	58932

Procedure:

- mapping the prepositional variation on the semantic relations of N1 and N2
- contrastive analysis of specific examples and semantic relations
- comparison of the results with overall frequencies of the constructions and first speaker evaluations

Qualitative Analyse – Variation *de* and *à/a*

[N1 *à/a* N2]_N – [N1 *de* N2]_N

a kind of N1 that is defined by N2

[N1 *de/à-a* N2_{PURPOSE}]_N

flûtes de/à champagne; fil de/à pêche

forno a/de microondas

[N1 *de/à-a* N2_{TYPE/SPECIFICATION}]_N

course à/d'obstacles

freno de/a disco

lâmpião a/de gás

[N1 *de/à-a* N2_{INGREDIENT}]_N

crème au/de citron

biodiesel de/ao óleo

[N1 *de/à-a* N2_{BODY PART}]_N

fracture au/ du bras

infarto de/del/al miocárdio

Only in French:

[N1 *de/à-a* N2_{CONTAINER}]_N → *conteneur de/à déchets, corbeille de/à fruit*

[N1 *de/à-a* N2_{MEANS OF TRANSPORT}]_N → *course de/à vélo*

[N1 *de/à-a* N2_{SEKTOR/BILDUNGSGRAD}]_N → *étudiants de/au doctorat*

Only in Portuguese:

[N1 *de/à-a* N2_{REASON}]_N → *combate de/a crimes/doenças/incêndio/ obesidade*

Qualitative Analyse – Variation *de* and *à/a*

first tendencies

- this variation merely appears in Spanish, only as N2_{TYPE/SPECIFICATION} (*vehículo de/a motor; motor(es) de/a gasolina*)
 - as indicated in the quantitative analysis, this variation is more productive in French than in Spanish or Portuguese
 - this result is undermined by the comparison with the relative frequency in the overall corpus data as well as first speaker evaluations
 - speaker evaluations (as well as literature) highlight a meaning difference:
 - flûtes à champagne* → ‘un verre à usage spécifique’ (Purpose)
 - flûtes de champagne* → ‘un verre qui contient du champagne’ (Content)
- corpus data include both variants in both meanings! (to be verified by means of experimental investigations)
-

Qualitative Analysis – Variation *de* and *pour/para*

[N1 *de/pour-para* N2_{USER}]_N

club d'/pour enfants, collier de/pour chien
club/cuento/juego/ropa de/para niños
abrigo de/para animais; brinquedos de/para crianças

[N1 *de/pour-para* N2_{PURPOSE}]_N

décoration de/pour mariage/table
agua/alimentos de/para riego/consumo
acessórios de/para cozinha/decoração

[N1 *de/pour-para* N2_{USER(OBJECT)}]_N

musique de/pour piano
juego de/para pc, música de/para cine
lápiz de/para olhos; concerto de/para piano

[N1 *de/pour-para* N2_{REASON}]_N

acusado do/pelo crime; cirurgia de/para correção

[N1 *de/pour-para* N2_{TIME}]_N

aluguel de/para férias; hora de/para almoço

[N1 *de/pour-para* N2_{DETERMINATION}]_N

animais de/para abate/produção, pista de/para caminhada

[N1 *de/por* N2_{REASON}]_N

prestación(es)/ subsidio de/por desempleo
bônus de/por desempenho

[N1 *de/por* N2_{INSTRUMENT}]_N

herida(s) de/por arma, internet de/por banda
energia de/por fontes, imagens de/por satélite

Preliminary Conclusion

- Spanish presents the fewest prepositional variation with the fewest types of semantic relations
 - Spanish has the strongest tendency to formations with *de*
 - French offers more variation with different types of semantic relations than Spanish
 - In French, speakers tend the most to rate the use of prepositional variation as ‚incorrect/not acceptable‘
 - In some cases, corpus data and speaker evaluations contradict each other in French
 - Portuguese shows the most frequent and productive variation that most speakers accept without difficulties
-

Preliminary Conclusion

- the N Prep N constructions under investigation appear indeed to be formed according to productive word formation rules (or templates) that may underlie variation depending on their semantic properties
 - the specific rules of word formation, the preference for a specific prepositional element as well as their productivity vary among the three languages under investigation
 - the prepositional element is not a ‚pure linking element, lacking all semantic content‘, but rather an important element in word formation, whose semantic properties play an important role in the variation of N Prep N constructions as well as the creation of new constructions
 - Construction grammar (esp. construction morphology) seems to be an appropriate tool for visualizing first patterns, which will further be investigated by means of psycholinguistic experimentation
